

# Algclean

## Description

Algclean is an industrial strength algae treatment, suitable for ponds, water features, dams and wetlands.  
Algclean is formulated for South African conditions

## Advantages

Algclean kills algae, dead!  
Algclean is safe for humans, pets, wildlife and plants  
Algclean is 100% environmentally friendly  
Algclean will flocculate water  
Algclean will soften water, making it easier to filtrate

## Application

Use in all bodies of water where algae has become prevalent and uncontrollable  
Treatment of koi ponds, water features, breeding ponds

## Dosing

Algclean must be diluted with pond water as per specification  
After dilution, Algclean is more effective if distributed evenly over the surface  
Algclean can be sprayed on the algae as a first step  
If the organic load is high, multiple dosages may be needed

## Dilutions

1 litre of ALGLEAN can treat 50 000 litres of water  
20ml per 1000 litres of water

It is important to calculate, the amount of water to be treated, as accurately as possible and must be added over two days, i.e. half the dose on day one and the other half the next day. Example: Total dose for 20 000 litres will be 400ml of Algclean. 200ml DILUTED to be added on day one and 200ml DILUTED the next day.

$\text{Pond Volume} = \text{Length (in meters)} \times \text{Breadth (in meters)} \times \text{Average Dept. (in meters)} \times 1000$

DO NOT OVERDOSE – although Algclean is environmentally friendly, overdose can be harmful to aquatic life.

Follow-up dose should take place after 5 to 7 days from each other.

If any other has been used with the 7 to 14 days DO NOT DOSE with Algclean before consulting with your distributor.
